Aprašymas:

We are Workshop of Photonics I WOP - a growing high-technology company providing solutions and technologies for industry and science customers worldwide. We deliver fully integrated services from feasibility and prototyping to actual solutions - manufacturing services and laser workstations that enable our customers to reach their goals.

We build a brand-new in-house team to develop Laser Fabrication, Nanoscale Motion Control, HMI, and Embedded systems. In a nutshell, to control lasers, build robots to control lasers, grow neural networks to build robots to control lasers. Building a sustainable lightsaber, drawing a smiley face on the surface of the moon, providing advanced mining multi-tools for Mars exploration comes as a package deal. That is why we are looking for software developers with profound knowledge of .NET/C# to join us. Keep reading, and if looks interesting enough, let us know! In case the feeling is mutual, we will let you know as well!
